

WATER COLLECTOR

- the device is used to collect water from two fire hoses and transfer it to one discharge hose
- the check valve used in the collector allows for automatic closure of one of the two water inlets in case of a significant difference in supply pressure
- these devices are indispensable during larger operations involving multiple fire engines, motor pumps, or high-capacity fire hoses

technical information:

Type	water collector
Thread sizes	inlets 2,5", outlet 4"
3 Way Ball Divider weight	3,30kg
Material	Aluminum, brass, seals EPDM
Operating pressure	2 Mpa
Diameters	24cm x 26,5cm x 18,2cm
Certyficate	Katasztrófavédelmi Kutatóintézet in Budapest
